# **EPIGENETICS AND BREAST CANCER**

**27 September 2013**

**GISMA**

The iconic power of the double helix is related to its heuristic simplicity, particularly as a mechanism to explain inheritance.

However, the **script** needs to be interpreted and receives meaning only from the interplay with the environment (**interpretation of the script**).

ms 52

A handwritten musical score consisting of ten staves. The notation includes various rhythmic values such as quarter, eighth, and sixteenth notes, as well as rests and beams. There are several annotations and markings throughout the score, including the word "ritardando" written in cursive on the lower staves. The handwriting is somewhat dense and appears to be a working draft or a composer's sketch. The paper shows signs of age and wear.

**A****B****Gene “switched on”**

- Active (open) chromatin
- Unmethylated cytosines (white circles)
- Acetylated histones

**Gene “switched off”**

- Silent (condensed) chromatin
- Methylated cytosines (red circles)
- Deacetylated histones

# Epigenetics and Cancer

- **Growing data on the importance of epigenetics in the aetiology and pathogenesis of cancer**

## **1. DNA methylation**

- **Gene specific hypermethylation (eg RASSF1, MLH1)**
- **Genome-wide hypomethylation (4% down to 2-3% of all cytosines)**

## **2. Histone Modifications**

- **Active vs Inactive histone marks**
- **Polycomb group gene silencing (H3-K27-me3)**

Many cancer risk factors cause epigenetic modifications

## Epigenetics and The Environment

- Epigenetic changes can be inherited mitotically in somatic cells
- Pre-natal and early post-natal exposures can result in changes in risk of developing disease
  - Nutrition
  - Xenobiotic chemicals
  - Behavioural Factors
  - Reproductive Factors, Hormonal Exposures

# Our own research at HuGeF and Imperial College

- **Smoking as an exposure alters DNA methylation detected in blood, and can be detected in Former Smokers up to 20 years later**
  - Shenker et al., HMG 2013
  - Shenker et al., Epidemiology, 2013
- **Fasting status influences the Epigenome, including the ATM methylation marker**
  - Brennan et al, submitted
- **Socio-economic status and gene methylation**
  - Stringhini et al, submitted
- **Intragenic ATM DNA methylation is associated with breast cancer risk**
  - Flanagan et al., HMG 2009
  - Brennan et al., Cancer Research 2012
- **Breast cancer: Global methylation EWAS (using 450K array data) as risk factor for breast cancer**
  - Van Veldhoven et al, submitted ; Baglietto et al, submitted

# EWAS for smoking status – Discovery

*Breitling et al AJHG April 2011*

### Methylation Associated with Smoking Status

### QQ plot - Smoking

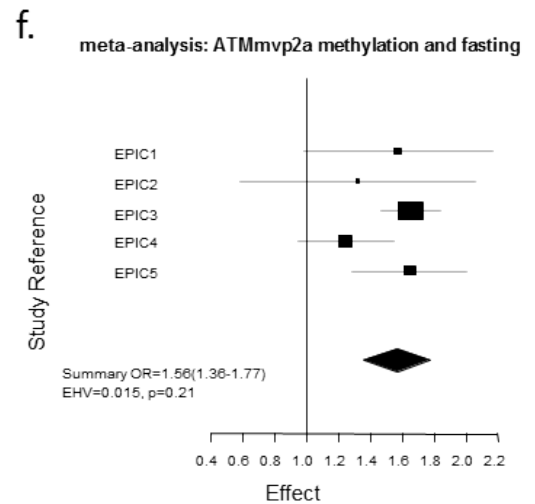

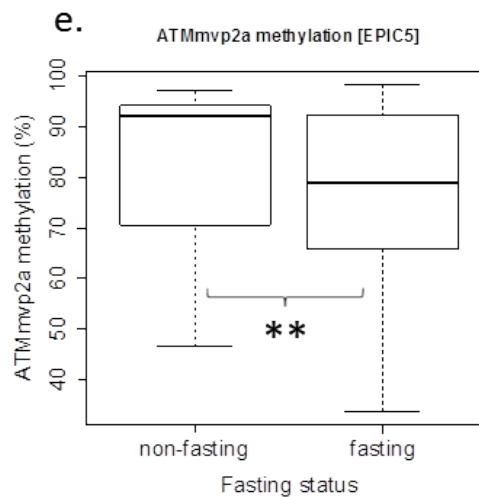

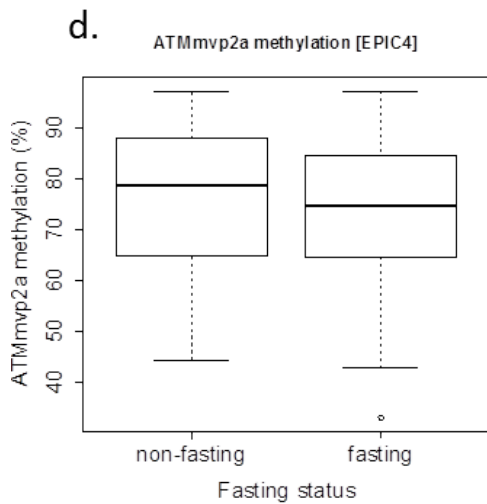

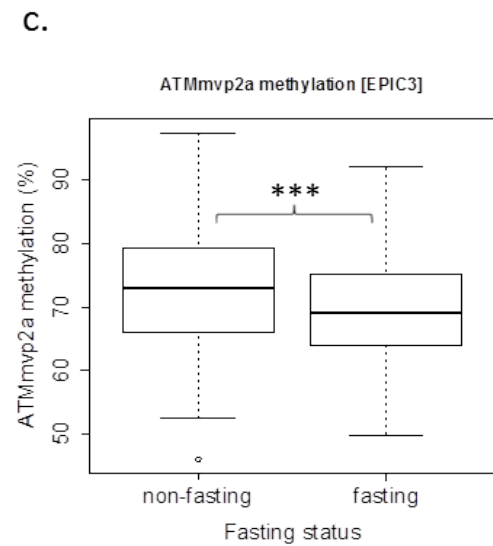

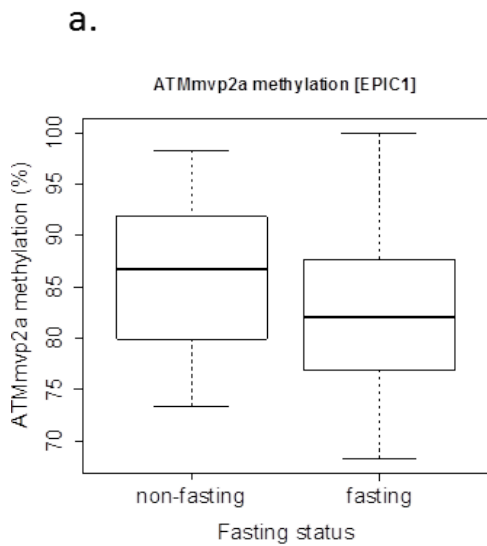

# Methylation Index to detect former smokers (or to quantify former exposure)

Never vs Former Smokers

# Fasting status

# Dominance rank and expression level of pro-inflammatory genes (macaques)

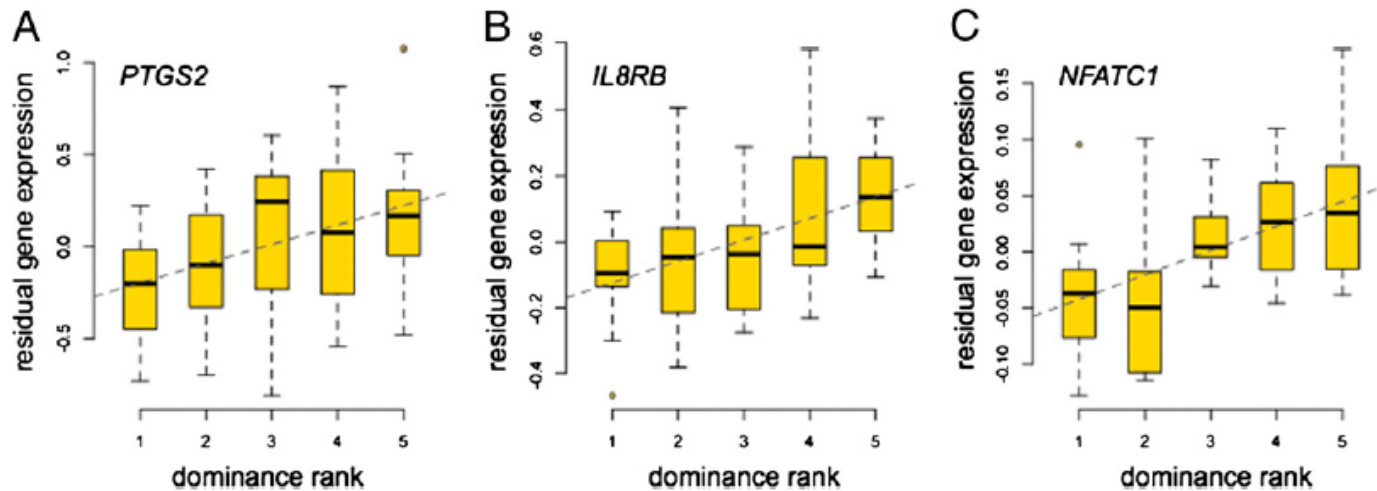

Fig. 2. Rank-gene expression associations among inflammation-related immune genes. Low-ranking females tend to overexpress inflammation-related genes: (A) *PTGS2* ( $P = 0.004$ ); (B) *IL8RB* ( $P = 0.003$ ); and (C) *NFATC1* ( $P < 10^{-3}$ ).

# SES and DNA methylation – EPIC Turin

## NFATC1

- NFATC1 is one of the three genes whose expression was more strongly associated with social rank in macaques (more expressed in macaques with low social rank)
- NFATC1 gene is involved in the expression of cytokine genes in T-cells, especially in the induction of the IL-2 or IL-4 gene transcription
- NFATC1 regulates not only the activation and proliferation but also the differentiation and programmed death of T-lymphocytes as well as lymphoid and non-lymphoid cells

Breast cancer

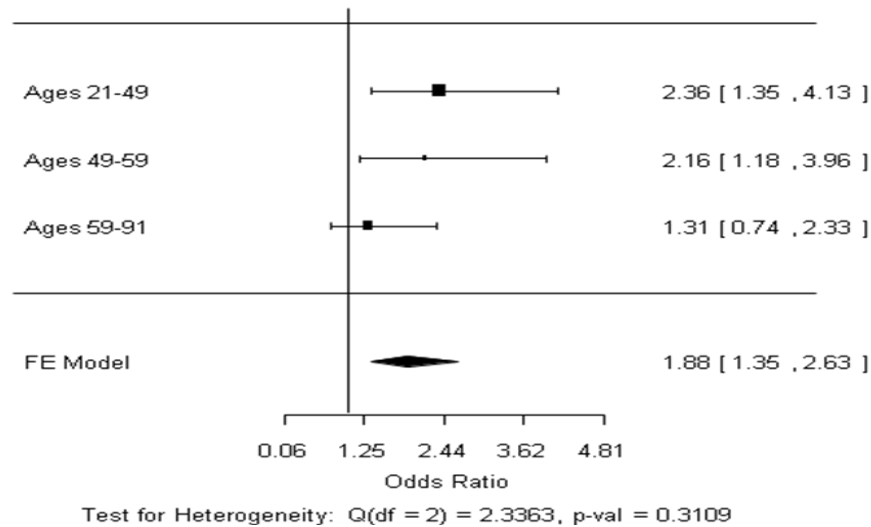

# Methylation of ATM and breast cancer.

Flanagan J, Vineis P et al. (Cancer Res,2012).

**A**

**B**

**HuGeF study on 450K genome-wide methylation and breast cancer (162 cases and 162 controls; nested, matched case-control study within the EPIC Italian cohort)**

**Global average hypomethylation is associated with BC**

**(VanVeldhoven et al, submitted; results replicated in an Australian cohort, Baglietto et al, submitted)**

		OR	(95% CI)	p-value
By quartiles	<i>Q1</i>	1.00		
	<i>Q2</i>	0.31	(0.16 – 0.63)	0.001
